

The University of Hong Kong Faculty of Architecture

Introduction to the Faculty and departments

The Faculty of Architecture at the University of Hong Kong is introducing students to a life-long process of learning through the lens of professionals, specific to the fields of architecture, conservation, landscape architecture, surveying, urban planning and design, whilst simultaneously extending those areas of knowledge within the Faculty to a range of other disciplines.

The Departments of Architecture, Real Estate and Construction, Urban Planning and Design, and the Division of Landscape Architecture cover the diverse knowledge required for shaping our built and urban environment, including: building design and technology; the history and theory of architecture, conservation and landscape architecture; landscape design; management of land and construction strategies; property maintenance; real estate valuation and project management; urban design and urban development theories.

In parallel, the Faculty continually develops and advances these areas of knowledge through interdisciplinary engagement with emerging fields such as artificial intelligence, geospatial data analytics, and digital technologies, preparing graduates to address complex societal, environmental, economic, and urban challenges in an increasingly digital and interconnected world.
