E-Learning and E-Portfolio

Faculty of Science
The University of Hong Kong
E-learning in the 1st sem, 2020-21

• To facilitate students who have difficulty to attend class in person, course materials will be available online. For lectures, there will be live streaming or recording and uploading to Moodle. For small-group work, students who are not in Hong Kong may connect with the class through Zoom or other means. However, please understand that it may be difficult to gain exactly the same learning experience online for some course elements such as labs.

• The Faculty will work with central units such as TELI, CETL and ITS to facilitate teachers in preparing online teaching materials.
**E-portfoilo**

- The e-Portfolio System can be used to capture, document and evaluate student achievements and reflections in academic, co-and extra-curricular learning activities.
- This platform enables students to record their experiential learning activities and ongoing personal development throughout their studies at the University. Students can share their learning journeys with advisors, mentors, peer students or potential employers.
- Through the System, teachers can also evaluate students’ learning progress under applicable scenarios and assess students’ learning experiences and reflection in individual courses.
- It is accessible at [https://eportfolio.hku.hk/](https://eportfolio.hku.hk/) using your HKU Portal account.
